

Topping Lift, Main Traveller, Back of Jiffy Reef.

A - This is the Topping Lift for boom. Small blue line is tied to loop on back of boom. Runs up to small block then back down to boom through side block up to a clam cleat. This adjusts height of boom for sail shape. When sails are down for storage, boom can clip to back stay. You will have to ease main traveler to do this.

B - One of blocks for running jiffy reefing system.

C- Main traveller. Connects to boom and stern of boat.
