Owner's Responsibilities...

It is the owner's/operator's responsibility to perform the necessary safety checks to ensure that all lubrication, cooling, maintenance and recommended practices are followed for safe, enjoyable operation.

Proper care and maintenance will only help ensure long service life from your Velvet Drive® transmission.
SECTION I  
GENERAL INFORMATION

1-1. Every Velvet Drive® marine transmission is self-contained, having its own sump and hydraulic pump separate from the engine. The gear driven pump affords assurance of positive lubrication.

1-2. The Velvet Drive® In-Line hydraulic transmission is available in two (2) models with numerous final drive ratios suitable for inboard pleasure and work boats.

1-3. Two (2) V-Drive transmission models will accommodate twin screw applications using engines with the same rotation.

1-4. The identification tag that appears on these Velvet-Drive® transmissions is located on the top of the left-hand transmission mount and contains valuable information concerning the transmission. This information is as follows:

a. **Model Number** — This appears below the words “Velvet Drive.”
b. **Ratio** — The gear ratio appears in the left-center of the identification tag.
c. **Serial Number** — Appears at the right-center under the model number.

1-5. Transfer the information on your identification tag to the Maintenance Record Chart on page 10 of this manual. Additionally, the color of the identification tag should be noted in the appropriate space and the date placed in operation.

1-6. The model number and serial number is required on all correspondence.

![Identification Tag](image)

**Figure 1-1. Identification Tag**

* Gear ratios vary depending on model number.
** Fluid capacity is approximate and depends on installation angle and cooling system.
SECTION II
LAUNCH MAINTENANCE

2-1. The following maintenance should be performed after launching your boat to ensure optimum performance and life from your Velvet Drive® transmission.

CAUTION
Vibration, gear noise, loss of rpm and premature oil seal and bearing failure can be caused by misalignment of propeller shaft coupling and transmission output coupling flange.

2-2. Propeller shaft coupling flange and transmission output flange alignment is performed after launching of your boat as well as any time your boat strikes a heavy object or after your boat has been hoisted or pulled from the water.

CAUTION
Remove attaching hardware from transmission output flange and propeller shaft coupling flange before removing boat from water and separate flanges.

2-3. Check the alignment of the transmission output flange and propeller shaft coupling flange using the following procedure with boat in water:
   a. Disconnect the battery.
   b. Remove attaching hardware from coupling flanges.
   c. Check clearance around coupling flanges with .003 feeler gage and flange pilot engaged.
   d. Rotate coupling flanges together one complete revolution, stopping every 90° to check clearance with .003 feeler gage.
   e. Alignment is satisfactory when the transmission output flange and propeller shaft coupling flange with pilot seated are within .003 inch (.076mm) of parallel.
   f. If alignment is unsatisfactory, an adjustment is required (see paragraph 2-4).
   g. When alignment is satisfactory, tighten attaching hardware.

2-4. Propeller and Output Shaft Adjustment

CAUTION
Do not lift or pry against transmission output flange or coupling to move engine.

This adjustment is accomplished at the boat motor and transmission mounts ONLY. This procedure should be accomplished by a skilled marine mechanic.

Figure 2-1. Coupling Shaft Alignment
2-5. Shift Lever Positioning
The selector control mechanism and linkage must position the shift lever on the transmission exactly in Forward (F), Neutral (N), and Reverse (R) shifting positions. A detent ball located behind the transmission shift lever must work freely to center the lever in each position. (see Figure 2-2). The selector control positions at the helm(s) must be coordinated with those of the Velvet Drive® shift lever through shift mechanism adjustments. An improperly adjusted shift mechanism can cause damage to the transmission.

NOTE: When moving from Neutral Position to:
Forward is always toward engine.
Reverse is always away from engine.

CAUTION
Clutch failure will occur if transmission shift lever does not fully engage detent ball positions.

CAUTION
Serious transmission damage can result if the shift cable is attached so the transmission is operating in reverse to achieve forward direction.

The shifting mechanism and transmission shift lever should be free of dirt to ensure proper operation.

CAUTION
Do not remove detent ball.

2-6. Transmission Connections
a. Visually check for oil leaks at hydraulic connections, worn hydraulic lines.
b. Check for broken or loose fasteners.
c. Replace all worn hydraulic lines, tighten all connections where an oil leak has occurred, and secure all hydraulic lines.
d. Visually check all electrical connections for loose terminals and worn wires.
e. Repair or replace all worn or broken wires to U.S. Coast Guard specifications and tighten all loose connections.

2-7. Transmission Bolts
a. Check all exterior transmission bolts for tightness.
b. Tighten all loose bolts to recommended torque specifications.
c. Tighten all coupling bolts.

2-8. Change Transmission Oil
A seasonal transmission oil change is recommended for all pleasure boats. Work boats require transmission oil changes every 1,000 hours. Oil must be changed anytime it becomes contaminated, changes color, or becomes rancid smelling.

WARNING
Do not use gasoline or any other volatile or highly combustible liquid as a solvent.
2.9. Removing Transmission Oil
   a. Place an appropriate size container near oil cooler return line.
   b. Remove oil filler cap and dipstick assembly (see Figure 2-3).
   c. Remove oil cooler return line.
   d. Allow oil from return line to drain into container.
   e. Connect oil cooler return line and torque to 25-35 ft.-lbs. (34-47 N·m).
   f. Use a suction pump in the oil filler cap hole to remove remaining oil in the transmission.
   g. Remove suction pump from transmission.

2.10. Fill Transmission With Oil
   The quantity of oil depends upon the model Velvet Drive® (see Table 1-1 for capacity) angle of installation and oil cooling system capacity.

**NOTE:** Oil capacities in Table 1-1 are for transmission only. Additional oil will be required for oil cooling system.

**WARNING:** DO NOT REMOVE DIPSTICK WITH ENGINE RUNNING. HOT OIL CAN CAUSE BURNS.

**CAUTION:** Clean around the area of the dipstick, before removing. Small particles of dirt can cause damage to internal components and cause valves to stick.

Check Oil Level

The transmission should be at operating temperature (190° max.) to get an accurate oil level reading. Oil will expand when it is heated. Oil will drain back from the cooler. Expansion and drain-back can significantly affect oil level.

Warm Oil Level Check

With the engine at operating temperature, place the control lever in neutral and shut down the engine. Remove the dipstick by holding the base and turning the T-handle counter clockwise (see figure 2-4). Wipe the dipstick clean and insert the dipstick fully into the transmission, withdraw, and read the fluid level. Add or remove fluid as necessary to bring the fluid level to the full mark on the dipstick. Replace dipstick and tighten by holding the base and turning the T-handle securely clockwise.”

**NOTE:** Oil level must be checked immediately after engine shut-down to prevent an incorrect reading. Oil drains back into transmission from the cooler and cooler lines.
Add or remove oil if necessary. Repeat the above checking procedure as required until oil is at the dipstick mark.

Cold Oil Level Check.

For ease of checking the oil prior to engine start-up, a cold oil level mark can be made. To find the cold oil level mark, the oil level must first be set according to the warm oil level checking procedure. Then, let the boat sit overnight. Insert clean dipstick and read oil level.

Put a mark on the dipstick at the cold oil level reading.

You can use the new mark to check the oil level when cold. If oil level adjustment is needed, add oil to the new mark.

**Low Speed Vibration**

System related noises or vibrations can occur at low engine speeds which can cause gear rattle resulting in damage to the boat engine and/or transmission. Velvet Drive Transmissions is not responsible for total system related torsional vibration of this type.

---

**TYPE OF OIL**

**TRANSMISSION FLUID.** General Motors Dexron III, Ford Mercon, Daimler-Benz 236.6 or any SAE 10 hydraulic oil that meets Allison C3, Caterpillar TO-2 or equivalent specification is recommended.

**NOTE:**

Because of the continuous development of oil formulation, some high performance applications may result in foaming and leakage from the transmission's vent. Under these circumstances, Velvet-Drive suggest using oils meeting Allison C3 or Caterpillar TO-2 specifications. In addition, it may be necessary to experiment with the fluid level in these applications.

Do not mix different brands or types of oil.

If the transmission oil temperature has exceeded 190 degrees Fahrenheit or if the transmission alarm sounds, the oil must be changed.

Any changes or modifications to the transmission cooling system may require the oil level be readjusted.

Any additions to the boat which will change the installation angle of the transmission at rest (such as extra fresh water tanks, fuel supply, etc.) may require an oil level adjustment.
SECTION III
OPERATION

3-1. Perform all pre-operation maintenance on the Velvet Drive* transmission (see paragraph 2-12).

3-2. At the helm place transmission selector control in Neutral before starting engine. Shifts from any selector position to any other selector position may be made at any time below 1000 rpm and in any order. Shifts should be made at the lowest practical engine speed.

CAUTION
Shifting above 1000 rpm can severely damage boat, transmission and engine.

a. Neutral — Move selector lever to the middle position. You should feel the detent center the shift lever on the transmission through the linkage to the selector lever. With the control in this position, hydraulic power is completely interrupted and the output shaft of the transmission does not turn.

b. Forward — Move selector lever to the forward position. You should feel the detent. The shift lever on the transmission in the forward position. The output shaft and the propeller should move the boat in a forward direction.

WARNING
If boat moves backwards with the selector control in the forward position, shut off engine (see paragraph 2-5) or consult your nearest Velvet Drive* distributor.

NOTE: This problem can be a result of improper installation by the boat builder or service facility.

CAUTION
Early gear failure will occur when the transmission is operated in reverse to obtain forward propulsion.

c. Reverse — Move selector lever to the rearward position. You should feel the detent. The shift lever on the transmission is in the reverse position. The output shaft and the propeller should move the boat in a reverse direction.

3-3. Velvet Drive* Transmission Operation

a. Place selector control in the Neutral position.

b. Start engine and set throttle at idle speed and warm up transmission oil for a few minutes.

c. Be aware of any unusual noises or vibrations and investigate to determine the cause.

CAUTION
Before checking oil, shut off engine. Hot oil could cause burns.

d. Shut off engine and check transmission oil level and add oil, if required, to the full mark on the dipstick.

e. Restart engine.

3-4. Freewheeling — It has been determined by tests and practical experience that all Velvet Drive marine transmissions can be freewheeled without risking damage in sailing or trolling applications. Caution should be taken to be sure that proper oil level is maintained prior to freewheeling as well as normal running. Freewheeling one propeller of a twin engine boat at trolling speeds will not cause damage to the transmission connected to the freewheeling propeller.

SECTION IV
WINTER STORAGE

4-1. Storage requires special care. Before winter storage one must:

a. Disconnect battery,

b. Drain water from the transmission oil cooling system.

c. Wipe transmission free of dirt, grime and grease.

d. Touch up unpainted areas of the transmission using suitable paint.

e. Remove attaching hardware from transmission output flange and propeller shaft coupling, and separated flanges before removing boat from water.
## SECTION V
### TROUBLESHOOTING

5-1. Velvet Drive® is a self-contained, precision built marine transmission. Should trouble occur, consult Table 5-1 for remedy.

VELVET DRIVE® MARINE TRANSMISSION WARRANTY

Seller warrants to engine manufacturers and to seller's distributors only that all Velvet Drive® marine transmissions manufactured or furnished by seller shall be free from defects in material and workmanship under normal use and service for a period of twelve months for pleasure craft installations or six months for commercial craft installations from date placed into operation by the original owner/operator or twenty-four months from date of shipment to the engine manufacturer or to seller's distributor, whichever occurs first.

This warranty shall not apply to any product or part which has been subjected to misuse, negligence, damage in handling or shipment, modification or alteration, improper maintenance, or use beyond the product's rated capacity or in any other improper manner.

Seller's obligation under this warranty is expressly limited to the repair or replacement, at its option, of Velvet Drive® marine transmissions which are returned f.o.b. seller's factory, New Bedford, Massachusetts, and which are determined by seller to be defective.

THIS IS THE SOLE AND ONLY WARRANTY OF SELLER AND NO OTHER WARRANTY IS APPLICABLE, EITHER EXPRESSED OR IMPLIED, IN FACT OR BY LAW, INCLUDING ANY WARRANTY AS TO MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE.

The sole and only remedy in regard to any defective Velvet Drive® marine transmission shall be the repair or replacement thereof as herein provided, and seller shall not be liable for any consequential, special, incidental, or punitive damages resulting from or caused by any such defects.
