FOREWORD

Thank you for purchasing the AT-141 HF AUTOMATIC ANTENNA TUNER.

The AT-141 is designed, primarily for use with Icom HF transceivers.

Refer to your HF transceiver instruction manual for operation. If you have any questions, contact your dealer.

IMPORTANT

READ ALL INSTRUCTIONS carefully and completely before using the AT-141.

SAVE THIS INSTRUCTION MANUAL. This instruction manual contains important safety and installation instructions.

EXPLICIT DEFINITIONS

<table>
<thead>
<tr>
<th>Word</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>WARNING</td>
<td>Personal injury, fire hazard or electric shock may occur.</td>
</tr>
<tr>
<td>CAUTION</td>
<td>Equipment damage may occur.</td>
</tr>
<tr>
<td>NOTE</td>
<td>If disregarded, inconvenience only. No personal injury, fire hazard or electric shock.</td>
</tr>
</tbody>
</table>

PRECAUTIONS

⚠️ DANGER HIGH VOLTAGE! NEVER touch the antenna terminal, ground terminal, antenna or counterpoise while transmitting. Place the AT-141, antenna and counterpoise in positions where no one can touch them.

NEVER use without a ground connection.

NEVER transmit during internal adjustment. This may cause an electric shock.

USE the ground terminal for ground connection. The mounting plate is not connected internally.

DO NOT operate your HF marine transceiver without running the boat’s engine.

AVOID using the AT-141 in areas where the temperature is below –30°C or above +60°C.

SUPPLIED ACCESSORIES

The following accessories are supplied with the AT-141.

<table>
<thead>
<tr>
<th>Item</th>
<th>Qty.</th>
</tr>

MISCELLANEOUS ITEMS

The following parts are additionally required for installation, but are not supplied with the AT-141. Purchase these parts locally.

1. AWG 14×4-conductor shielded cable
   *Icom offers an optional OPC-1465 CONTROL CABLE.
   Length: 10 m; 32.8 feet
2. 50 Ω coaxial cable
3. PL-259 connectors

FEATURES

Matches all bands
The AT-141 matches any frequency on every HF marine band. For example, the tuner matches a 7 m; 23 ft long-wire antenna across 1.6–30 MHz.

Full automatic tuning
Just push the [TUNE] key on the transceiver, and the AT-141 adjusts immediately to the minimum SWR of any frequency on any HF marine band.

HF operation on any size ship
The AT-141 allows you HF operation where antenna element length is restricted due to space.

Weather resistant
The AT-141 is housed in a durable, completely weather resistant ASA case with a rubber gasket. The antenna tuner can be conveniently installed both on the deck or in the cabin near the antenna element.

Simple installation
Installation is simple. Just connect the control and antenna cables. You never need to open the cover.

45 memories for shorter tuning time
To decrease the tune-up time, the AT-141 automatically stores the matching conditions for up to 45 frequencies. Re-tuning for a memorized frequency takes approx. 1 sec.

Super capacitor for memory backup
Even if the AT-141 is not used for approx. 1 week, the built-in super capacitor backs up contents of the 45 memories.

Low power tune up
The AT-141 emits low output power during tuning. This feature reduces the possibility of causing interference to other stations.

Tuner through function
The tuner through function is built into the AT-141. This function helps improve receiver gain, depending on the antenna element length used, and operating frequency.

**ANTENNA SYSTEM**

**Antenna for ship**

**Required antenna element length**

Required antenna element length to achieve full performance varies according to the lowest frequency:

<table>
<thead>
<tr>
<th>The lowest frequency</th>
<th>Required antenna element length</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.6 MHz band</td>
<td>7 m; 23.0 feet or longer</td>
</tr>
<tr>
<td>4 MHz band</td>
<td>3 m; 9.8 feet or longer</td>
</tr>
</tbody>
</table>

The longer the antenna element, the better the antenna efficiency.

**Undesirable antenna element lengths**

**AVOID** multiples of \( \frac{1}{2} \lambda \) (half wavelength) for antenna element lengths, since tuning becomes difficult.

\[
L = \frac{300}{f} \times \frac{1}{2} \times n
\]

**Example**

At an operating frequency of 16 MHz, avoid the following antenna element lengths:

\[
L \approx \frac{300}{16} \times \frac{1}{2} \times n \approx 9.4, 18.8, ...
\]

1 m \( \approx \) 39 inches

For example, if 15 m is selected for an antenna element length, you have no problem in the 1.6–25 MHz marine bands range.

**NOTE:** Keep antennas as far away from other objects as possible, especially metal objects.
Coaxial cable

Insulate the lead-in cable of the AT-141 antenna terminal and antenna element from other metal objects. To prevent interference, keep cables as far as possible from an antenna, electric pump and other electronic equipment.

To prevent erroneous indications, keep cables as far away as possible from the flux gate compass. Use suitable noise filters for alternators, fluorescent lights, etc. Ask your Dealer for details.

Ground and counterpoise

Why a ship’s ground is required
The AT-141’s ground terminal MUST be connected to your ship’s ground. Grounding prevents electric shocks, interference to other equipment and other problems. Grounding also ensures effective signal transmission.

DANGER! NEVER connect the ground terminal to the following points. These connections may cause an explosion or electric shocks:
- Gas or electrical pipe
- Fuel tank or oil-catch pan

IMPORTANT! The mounting plate is NOT connected to the AT-141’s internal ground.

Ideal ground points
One of following points is ideal:
- External ground plate
- External copper screen
- External copper foil

Good ground points
If electrically connected to sea water, one of the following points is usable:
- Stainless steel stanchion
- Through mast
- Through hull
- Metal water tank

Undesirable ground points
AVOID the following points, if possible. These connections may cause noise or electrolysis:
- Engine block
- Ship’s DC battery ground

Electrolysis
All ground cables from the AT-141, HF transceiver, etc. on your ship should be connected to only 1 ship’s ground.

AVOID connection to 2 or more points. Voltage difference between 2 or more ship’s grounds may cause electrolysis.

AVOID connection between dissimilar metals where an electric current is present. These connections may cause electrolysis.

Counterpoise
If your ship is made of FRP, etc. and a good ship’s ground is not available, connect a counterpoise.

$\frac{1}{4}\lambda$ (quarter wavelength) radial for each band is suitable for a counterpoise. Install the counterpoise directly below the AT-141’s ground terminal. Insulate the ends of each radial from other metal objects. Lay out the radial horizontally and as straight as possible.

$L : \text{Counterpoise length for the operating frequency [m]}
\quad f : \text{Operating frequency [MHz]}
\quad L = \frac{300}{f} \times \frac{1}{4}$

[Example]
At an operating frequency of 16 MHz, use a counterpoise with the following length:

$L = \frac{300}{16} \times \frac{1}{4} \approx 4.7 \text{ [m]}
1 \text{ m} \approx 39 \text{ inches}$

Ground cable
For best results, use the heaviest gauge wire or metal strap available. Make the distance between the AT-141’s ground terminal and ship’s ground as short as possible.

Supplied ground cable can be used for ground connection to a through mast. Confirm that the through mast is electrically connected to sea water.

⚠️ WARNING!—When grounding to metal hull
Use a Zinc anode to protect the hull from electrolysis.
Ask your technical dealer, installer or refer to a technical book, etc., for RF ground details.
2 INSTALLATIONS

■ Installation outline

1. Connect a control cable and 4-conductor shielded cable.
   • Refer to “Control cable” below.
2. Connect and solder the PL-259 connector to the coaxial cable.
   • Refer to p. 4 “PL-259 connector.”
3. Mount the AT-141 in the desired location.
   • Refer to p. 4 “Mounting.”
4. Connect the control and the coaxial cables between the transceiver and the AT-141.
   • Refer to p. 5 “Cable connections.”
5. Connect an antenna, ship’s ground or counterpoise.
   • Refer to p. 1 “Antenna for ship” and p. 2 “Ground and counterpoise.”

■ Control cable

Between the AT-141 and HF marine transceiver, connect 4 control signal lines as shown below. To prevent RF feedback, use a 4-conductor shielded cable. Connect the shield line to the [GND] terminal on the transceiver. Icom offers 10 m (32.8 ft) long optional control cables as at right.

When connecting to Icom IC-M801E

[ANTC] : Black
[13.6]  : Red
[STAR] : White
[KEY]  : Green

Use the optional OPC-1465, or assemble the desired length 4-conductor shielded cable and the connector kits supplied with the transceiver and the tuner.

OPC-1465  : for IC-M801E

Refer to p. 6 “Terminal information” for details.
**PL-259 connector**

1. Slide the coupling ring over the coaxial cable. Strip the cable jacket and pull back to reveal 10 mm of braid.
   - Soft solder the exposed braid and then pull out the jacket.

2. Strip the cable as shown below. Soft solder the center conductor the entire length of the exposed braid.

3. Slide the connector body over the cable and solder as shown below.

4. Screw the coupling ring onto the connector body.

**Mounting**

Attach the AT-141 either horizontally or vertically with one of the water drains facing downwards. After mounting, remove the screw in the water drain.

**Mounting on a Mast/Metal pole**

**Using U-bolts**

**Using nuts and bolts**

**Using self-tapping screws**

**WARNING:** Mount the AT-141 securely with the supplied nuts and bolts. Otherwise, vibrations and shocks due to waves, etc. could loosen the antenna tuner making it fall, causing personal injury.
Cable connections

1. Connect the coaxial cable and the control cable to the AT-141 as illustrated below.
2. Cover both the antenna and the control cable connectors with rubber vulcanizing tape and fix it with a vinyl tape to prevent water seeping into the connector.
3. Fix both of the coaxial and control cables to protect the inside connections.
   - **DO NOT** pull the antenna and control cable receptacles. This may cause disconnection (in the AT-141), internal connector damaged or bad connection.
4. Connect the coaxial cable and the control cable to the transceiver as illustrated below.
5. Ground the transceiver, AT-141 and shield cable of the control cable via the ground terminal.
   - See p. 2 for grounding details.

**IMPORTANT!— AT-141
NEVER** ground the AT141 via the mounting plate. It is not connected to ground internally.
### Terminal information

Consider the following points when using a non-Icom transceiver.

<table>
<thead>
<tr>
<th>Terminal</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>[KEY]</td>
<td>Key voltage. Grounded during tuning. Max. current drain 100 mA.</td>
</tr>
<tr>
<td>[13.6]</td>
<td>13.6 V DC input terminal. Max. current drain 2 A</td>
</tr>
<tr>
<td>[STAR]</td>
<td>Receives start voltage. Max. current drain 1 mA</td>
</tr>
<tr>
<td>[ANTC]</td>
<td>Antenna current detector output</td>
</tr>
</tbody>
</table>

**Start voltage [STAR]**

When a start voltage (less than 1 V) is received, the AT-141 begins automatic tuning.

![Graph showing start voltage behavior](image)

*For tuner through operation; Less than 250 msec.

**Key voltage [KEY]**

During automatic tuning, the AT-141 grounds the key voltage line, and the HF transceiver reduces output power.

![Graph showing key voltage behavior](image)
UNIT DESCRIPTION AND SPECIFICATIONS

Unit description

- Frequency coverage: 1.6–30 MHz (with 7 m or longer antenna element)
- Power supply requirement: 13.6 V DC (supplied from HF transceiver)
- Current drain: Max. 2 A
- Operating temperature range: –30°C to +60°C
- Weight (approx.): 2.5 kg
- Antenna connector: SO-239 (50 Ω)
- Max. Input power: 150 W (PEP) 100 W (continuous)
- Automatic tuning time: Approx. 2–3 sec. (general condition) Max. 15 sec.
  Approx. 1 sec. (re-tuning for a memorized frequency)
- Automatic tuning accuracy: SWR 2.0:1 (after tuning, except for multiples of ½ λ)

All stated specifications are subject to change without notice or obligation.
